

UNIT 4 CHEMISTRY

INDEX

THE DIVERSITY OF ORGANIC COMPOUNDS

Organic Chemistry

Diversity of Carbon Compounds

Hydrocarbons

The Alkanes
The Alkenes
The Alkynes
Naming Hydrocarbons
Cyclic Hydrocarbons
Alkyl Groups
Aromatic Hydrocarbons
Naming Complex Hydrocarbons

Chemical Formulae

Functional Groups

Intermolecular Forces

Dispersion Forces
Dipole-Dipole Attraction
Identifying Polar Molecules
Hydrogen Bonding
Ion-Dipole Bonding
Intermolecular (Interparticle) Bonding

Alkyl Halides (Haloalkanes)

Systematic Naming of Simple Alkyl Halides
Properties of Alkyl Halides (Haloalkanes)
Solubility Properties
Patterns with Increasing Chain Length
Patterns in Isomers

Amines

Systematic Naming of Simple Amines
Properties of Amines
Solubility in Water
Patterns with Increasing Chain Length
Patterns in Isomers

Amides

Systematic Naming of Simple Amides
Properties of Amides

Solubility in Water
Patterns with Increasing Chain Length
Patterns in Isomers

Alcohols

Systematic Naming of Simple Alkanols
Properties of Alkanols (Alcohols)
Solubility Properties
Patterns with Increasing Chain Length
Patterns in Isomers

Aldehydes

Systematic Naming of Simple Aldehydes
Properties of Aldehydes
Solubility in Water
Patterns with Increasing Chain Length
Patterns in Isomers

Ketones

Systematic Naming of Simple Ketones
Properties of Ketones
Solubility in Water
Patterns with Increasing Chain Length
Patterns in Isomers

Carboxylic Acids

Systematic Naming of Simply Carboxylic Acids
Properties of Carboxylic Acids
Solubility in Water
Patterns with Increasing Chain Length
Patterns in Isomers

Esters

Systematic Naming of Simple Esters
Properties of Esters
Solubility in Water
Patterns with Increasing Chain Length
Patterns in Isomers

Summary: Properties of Organic Molecules

Naming Complex Organic Molecules – The IUPAC System

Isomers

Structural Isomers
Stereoisomers
Geometric Isomers
Cis and Trans Isomers
Optical Isomers

Chiral Molecules
Identifying Chiral Centres

Enantiomer Properties

ORGANIC REACTION PATHWAYS

Reactions Involving Organic Compounds

Acid-Base Reactions
Combustion Reactions
Oxidation Reactions
Reduction Reactions
Dehydration Reactions
Condensation Reactions
Hydrolysis Reactions
Hydration Reactions
Polymerisation Reactions
Substitution Reactions
Addition Reactions

Reactions Involving Alkanes

Reactions Involving Alkenes

Combustion Reactions

Substitution Reactions

Halogenation Reactions
Substitution of Functional Groups
Production of Alcohols from Chloroalkanes
Production of Amines from Chloroalkanes

Addition Reactions

Hydrogenation Reactions

Testing for Hydrocarbon Saturation Using Hydrogenation
Halogenation Reactions via Addition
Reactions Involving Bromine
Testing for Hydrocarbon Saturation – The Bromine Test
Reactions Involving Chlorine
Reactions Involving Hydrogen Halides

Hydration Reactions (Addition of Water)

Addition Polymerisation Reactions

The Production of Polyethene
The Production of PVC
The Production of Polystyrene
The Production of Teflon

Copolymers

Summary – Addition Reactions Involving Ethene

Oxidation Reactions

Oxidation of Primary Alcohols
Oxidation of Secondary Alcohols
Oxidation of Tertiary Alcohols
Reduction Half Equations

Redox Reactions in Other Organic Compounds

Condensation Reactions

Esterification
Polymerisation
Amide Formation
Hydrolysis Reactions
Hydrolysis of Esters

Acid-Base Reactions

Acidic Functional Groups
Basic Functional Groups

Hydration and Dehydration Reactions

Organic Reactions: Summaries

Reaction Pathways

Alcohols, Carboxylic Acids, Esters and Amides

Green Chemistry

The 12 Principles of Green Chemistry
Benefits of Green Chemistry

Yield versus Atom Economy

Waste Management and Pollution in the Chemical Industry

Waste Treatment

CHEMICAL ANALYSIS, MASS SPECTROMETRY, IR SPECTROSCOPY, NMR SPECTROSCOPY

Mass Spectrometry

The Mass Spectrometer
Mass Spectrometry of Elements
The Mass Spectrum
Profile in Terms of Particle Mass

Profiles in Terms of Mass to Charge Ratio
Mass Spectrometry of Molecular Compounds
Summary of Mass Spectrometer Reactions
The Mass Spectrum
Molecular Ion Peak
Base Peak
M+1, M+2 Peaks
Cracking/Fragmentation Patterns

Infrared Spectroscopy

The Infrared Spectrometer
Instrument and Operation
Infrared Spectra
Infrared Active Bonds
Interpreting Infrared Spectra
Important Points

IR Spectra of Alkanes
IR Spectra of Alkenes
IR Spectra of Alkyl Halides
IR Spectra of Alcohols
IR Spectra of Aldehydes and Ketones
IR Spectra of Carboxylic Acids
IR Spectra of Esters
Comparing Carbonyl Troughs
IR Spectra of Amines
IR Spectra of Amides
Quantitative Analysis
Advantages of Infrared Spectroscopy

NMR Spectroscopy

The NMR Spectrometer
General Operating Principles
Instrument & Operation In Detail
Resonance and Chemical Environment
Summary

Equivalent Nuclei

Determining Equivalence in Carbon-13 NMR Spectroscopy
Determining Equivalence in Proton NMR Spectroscopy
Symmetry and Equivalence

NMR Spectra in Detail

¹³C NMR Spectroscopy
Analysing Carbon-13 NMR Spectra
Proton NMR Spectroscopy
Identifying the Type of Hydrogen Producing a Peak
¹H NMR Data from the VCAA Data Booklet
Important Proton NMR Shift Values
Low Resolution Proton Spectroscopy
Integration Traces

Analysing Low Resolution Proton NMR Spectra
High Resolution Proton Spectroscopy
Why Does Splitting Occur?
Splitting Rules
Analysing High Resolution Proton Spectra
Combining Analytical Techniques

CHEMICAL ANALYSIS, CHROMATOGRAPHY, TITRATIONS

Chromatography (A Qualitative and Quantitative Technique)

Adsorption Chromatography
Thin Layer Chromatography (TLC)
Paper Chromatography

Operating Principles
Identifying Sample Components in Paper and Thin Layer Chromatography
Two-Dimensional Chromatography
A Comparison Between TLC and Paper Chromatography

Column Chromatography
Qualitative Analysis
Quantitative Analysis

Important Notes on Calibration Graphs

High Performance Liquid Chromatography

Order of Elution of Sample Components
Normal Phase HPLC Chromatography
Reverse Phase HPLC Chromatography
Summary of Elution Patterns in Chromatography
Advantages of HPLC

Volumetric Analysis (Titrations)

Apparatus Used in Volumetric Analyses
Preparing a Standard Solution
Primary Standards
Acid-Base Indicators
Choosing an Indicator for a Titration
Titration Curves
Comparing Titration Curves
Broad and Sharp Endpoints

Titration of a Strong Acid Against a Strong Base
Titration of a Weak Acid Against a Strong Base
Titration of a Strong Acid Against a Weak Base
Titration of a Weak Acid Against a Weak Base

Correct Rinsing of Titration Glassware

Errors Involving Primary Standards
Errors Involving Indicator Choice

Effects of Errors – Summary

Redox Titrations

FOOD CHEMISTRY

Biomolecules

Building Macromolecules

Breaking Down Macromolecules

Carbohydrates

Monosaccharides

General Monosaccharide Properties

Classification of Carbohydrates

Disaccharides

Comparison: Glucose, Fructose, Sucrose and Aspartame

Aspartame

Polysaccharides

Glycogen

Starch

General Properties of Polysaccharides

Hydrolysis of Carbohydrates

Glycaemic Index

Maintaining Blood Sugar Levels

Lactose Intolerance

Triglycerides: Fats and Oils

Classification of Fatty Acids

Omega – 3 and Omega – 6 Fatty Acids

Fats vs Oils

Cis and Trans Fats

Rancidity of Fats

Preventing Food from Going Rancid

Hydrogenation of Cis Fatty Acids

Addition of Antioxidants

Classification of Triglycerides

Hydrolysis of Triglycerides

Proteins

Amino Acids

Properties of Amino Acids

The Zwitterion

Changing the pH of Amino Acid Solutions

Separation of Amino Acids

Formation of Proteins

Protein Hydrolysis

Protein Structure

Denaturation & Coagulation of Proteins

Enzymes

Cofactors

Vitamins

Estimating the Energy Content of Food

Calorimetry

The Calibration Factor
