

UNIT 4 MATHEMATICAL METHODS

INDEX

PROBABILITY

Section 1: Introductory Probability

Basic Probability Facts
Probabilities of Simple Events
Overview of Set Language
Venn Diagrams
Probabilities of Compound Events

 Choices of Events – The Addition Rule
 Combinations of Events – The Multiplication Rule

 Dependent Events – Conditional Probabilities
 Independent Events

 Mutually Exclusive vs Independency of Events

Probability Diagrams

 Tree Diagrams
 Lattice Diagrams
 Venn Diagrams
 Karnaugh Maps

Mixed Questions

Section 2: Counting Techniques

Factorials
Permutations
Combinations

Section 3: Random Variables and their Distributions

Discrete Random Variables
Continuous Random Variables
Probability Distributions and Functions
The Cumulative Density Function

Parameters Used to Describe Probability Functions

Measures of Central Tendency

 The Mean Value (Expected Value)
 The Median
 The Mode

Measures of Spread

- The Range
- The Interquartile Range
- The Variance and Standard Deviation

Shapes of Probability Distributions

Section 4: General Discrete Probability Distributions

Characteristics of Discrete Probability Distributions
Finding Probabilities

The Expected Value or Mean

- Properties of $E(X)$
- The Expected Value of a Function

The Variance

- The Variance of Functions
- The Standard Deviation
- Two Sigma Property

Section 5: The Binomial Distribution

Properties of Bernoulli Sequences
Finding Probabilities
Using CAS Technology to Find Probabilities in Binomial Distributions
The Mean and Standard Deviation of Binomial Distributions
Calculating the Trial Size Given a Probability
The Binomial Probability Distribution Graph

Section 6: Select VCAA Questions

Short Answer Questions
Multiple Choice Questions
Extended Response Questions

PROBABILITY (CONTINUED)

Section 7: The Continuous Probability Distribution

Probabilities of Simple PDFs
Probabilities of Complex PDFs

The Mean of Simple PDFs
The Mean of Complex PDFs
The Mean of Functions in Terms of X

The Median of Simple PDFs
The Median of Complex PDFs
The Mode

The Variance and Standard Deviation of Simple PDFs
The Variance and Standard Deviation of Complex PDFs
The Variance of Functions in Terms of X

Sums of Independent Variables

The Range
Percentiles and Quantiles
The Interquartile Range
VCAA Questions – Continuous Distributions

Section 8: The Normal Distribution

Graphs of the Normal Distribution
Finding Probabilities Using Confidence Intervals
Finding Probabilities Using Technology

The Standard Normal Distribution

Calculating Z Values Page
Symmetry Properties of the Standard Normal Curve
Finding Probabilities from Z Scores

The Inverse Normal Distribution

Finding the Value of X or Z Given a Probability
Finding the Value of a Normal Random Variable

VCAA Questions – Normal Distribution

STATISTICAL INFERENCE

Important Definitions in Statistics

Common Notations
Sampling Distribution
Statistical Inference

Random Sampling

Important Definitions
What is Sampling?
The Sampling Process

Non-Probability Sampling

A. Judgment Sampling
B. Quota Sampling
C. Convenience Sampling

Probability Sampling

D. Simple Random Sampling
E. Systematic Random Sampling

- F. Stratified Random Sampling
- G. Cluster Sampling

Accuracy, Bias, Variability and Precision

Errors in Sampling

Proportions

- Sample Proportions
- Population Proportions
- Sampling Distribution of the Sample Proportion
- Sampling from Large Populations
- Sampling from Small Populations

Approximating the Sampling Distribution of the Sample Proportion With the Normal Distribution

- How to Determine Whether a Sample is Large
- Properties of the Normal Approximation for the Sampling Distribution of the Sample Proportion
- Calculating Probabilities Using the Normal Approximation

Estimators

- Point Estimates
- Confidence Intervals

- Interpreting Confidence Intervals
- Confidence Intervals for Population Proportions
- Confidence Levels
- Confidence Interval Formulae
- Critical Values & Multipliers
- Calculating Critical Values
- Finding a Confidence Interval for p

The Margin of Error

- Calculating the Margin of Error
- Factors that Affect the Margin of Error
- Reducing the Margin of Error

- Confidence Intervals in Terms of the Margin of Error
- Factors that Affect the Width of Confidence Intervals

- Finding the Point Estimate & Margin of Error from a Confidence Interval

- Calculating the Sample Size Needed to Estimate p
- Certainty vs Precision

INTEGRATION AND ITS APPLICATIONS

Integration and its Applications

Integrating Algebraic Expressions
Integrating Expressions – General Approach

Integrating $(ax + b)^n$

Integrating Trigonometric Expressions

Integrating Exponential Expressions

Integrating $\frac{1}{x}$

Integrating $\frac{g'(x)}{g(x)}$

Integrating Hybrid Functions

Integrating Composite Functions

Applications in Integration

Solving for the Constant c

Integration by Recognition

Definite Integrals

Important Properties of the Definite Integral

Approximating the Area Under a Curve

The Left Endpoint Approximation

The Right Endpoint Approximation

The Fundamental Theorem of Calculus

Using Integration to Find Areas Under Curves

Changing the Sign of an Area

Calculating Unsigned Areas or Areas

Solving for an Unknown Given an Area or Definite Integral

Areas Between Curves

Graphs of the Antiderivative Function

Applications of Calculus to Motion in a Straight Line

The Average Value of a Function
