# UNIT 3 BIOLOGY: BOOK 1

#### AREA OF STUDY 1: WHAT IS THE ROLE OF NUCLEIC ACIDS & PROTEINS IN MAINTAINING LIFE?

#### PART 1: UNIT 3 BIOLOGY COURSE OUTLINE & ASSESSMENT

Unit 3 Biology Study Design – How Do Cells Maintain Life?	Page 2
Area of Study 1: What Is the Role Of Nucleic Acids & Proteins in Maintaining Life?	Page 2
Area of Study 2: How Are Biochemical Pathways Regulated?	Page 4
School-Based Assessment	Page 5 Page 6

#### PART 2: PREREQUISITE KNOWLEDGE FOR UNIT 3 BIOLOGY

#### SECTION 1: CELLS & LIVING ORGANISMS

Section 1: Cells & Livin <mark>g Organ</mark> isms	Page 10
The Cell Theory The Seven Characteristics or Functions of Life Types of Organisms	Page 10 Page 11 Page 12
Prokaryotic Cells & Organisms Eukaryotic Cells & Organisms	Page 13 Page 16
A Comparison of Unicellular & Multicellular Organisms	Page 21
SECTION 2 : CELLULAR ORGANELLES & THEIR FUNCTIO	N(S)

Section 2 : Cellular Organelles & their Function(s)	Page 22
The Nucleus	Page 22
Nuclear Membrane	Page 22
Vacuoles	Page 23
Plastids	Page 23
Chloroplasts	Page 24
Cell Walls	Page 25
Cell Membrane (Plasma Membrane)	Page 25
Cytosol	Page 25
Cytoplasm	Page 26
Mitochondria	Page 26
Ribosomes	Page 26
Endoplasmic Reticulum (ER)	Page 27
Golgi Apparatus (Body/Complex)	Page 27
Vesicles	Page 28
Lysosomes	Page 28
Flagella & Cilia	Page 28

#### SECTION 3: THE STRUCTURE OF ANIMAL & PLANT CELLS

Page 30

Page 31 Page 31

Section 3: The Structure of Animal & Plant Cells

Features Common to All cells Differences between Plant and Animal Cells

# PART 3: AREA OF STUDY 1 – WHAT IS THE ROLE OF NUCLEIC ACIDS & PROTEINS IN MAINTAINING LIFE?

SECTION 1: NUCLEOTIDES & NUCLEIC ACIDS	
Section 1: Nucleotides & Nucleic Acids	Page 39
SECTION 2: DNA (DEOXYRIBONUCLEIC ACID)	
Section 2: DNA (Deoxyribonucleic Acid)	Page 40
DNA Nucleotide Base Pairing Summary: The Structure of DNA	Page 42 Page 45
SECTION 3: DNA IN EUKARYOTIC & PROKARYOTIC C	ELLS
Section 3: DNA in Eukaryotic & Prokaryotic Cells	Page 52
SECTION 4: DNA REPLICATION	
Section 4: DNA Replication	Page 55
How is DNA Replicated? Summary of DNA Replication	Page 56 Page 60
SECTION 5: RNA (RIBONUCLEIC ACID) & THE RIBOSC	OME
Section 5: RNA (Ribonucleic Acid) & the Ribosome	Page 63
RNA (Ribonucleic Acid) Comparing the Structures of RNA and DNA Types of RNA Involved in Protein Synthesis	Page 63 Page 64 Page 65
Messenger RNA (mRNA) Transfer RNA (tRNA) Ribosomal RNA (rR <mark>NA</mark> )	Page 65 Page 66 Page 68
DNA vs RNA – Similarities & Differences The Ribosome Where Can Ribosomes Be Found?	Page 69 Page 73 Page 74

SECTION 6: AMINO ACIDS & PROTEINS	
Section 6: Amino Acids & Proteins	Page 76
Proteins Importance of Proteins Amino Acids Classification of Amino Acids	Page 76 Page 76 Page 77 Page 78
Formation of Proteins & Polypeptides	Page 80
Protein Structure	Page 86
Primary Structure Secondary Structure Tertiary Structure Quaternary Structure Summary of Protein Structures The Importance of Protein Structure	Page 86 Page 87 Page 88 Page 88 Page 89 Page 89
Types of Proteins	Page 91
Fibrous Proteins Globular Proteins Conjugated Proteins	Page 91 Page 92 Page 93
Proteomics	Page 93
The Functional Diversity of Proteins	Page 99
Denaturation & Coagulation of Proteins	Page 103
Causes of Denaturation Additional Points Regarding Denaturation	Page 104 Page 105
SECTION 7: GENE EXPRESSION IN PROKARYOTIC	
Section 7: Gene Expression in Prokaryotic & Eukaryotic Cells	Page 108
Genes	Page 108
Gene Expression	Page 109
The Central Dogma in Molecular Biology Protein Synthesis (Gene Expression) Overview of Gene Expression The Transcription Unit	Page 109 Page 110 Page 110 Page 112
Stage 1 of Protein Synthesis: Transcription	Page 113
Step 1: Initiation Step 2: Elongation Step 3: Termination The End Product of Transcription	Page 114 Page 115 Page 117 Page 117

Stage 2 of Protein Synthesis: Pre-mRNA Processing (Post Transcriptional Modifications)	Page 123
Modification 1: A Methyl Cap is added to the 5' End Modification 2: A Poly (A) Tail is added to the 3' End Modification 3: Removal of Introns	Page 124 Page 124 Page 125
Alternative Splicing Exon Juggling Intron Retention	Page 127 Page 128 Page 128
Eukaryotic Transcription vs Prokaryotic Transcription	Page 138
Differences Between Eukaryotic & Prokaryotic Transcription Similarities Between Eukaryotic & Prokaryotic Transcription	Page 139 Page 140
The Genetic Code	Page 140
Stage 3 of Protein Synthesis: Translation	Page 146
An Overview of Translation Transfer RNA Ribosomes The Translation Process (In Detail)	Page 146 Page 148 Page 152 Page 153
tRNA Charging Step 1: Initiation Step 2: Elongation Step 3: Termination	Page 153 Page 155 Page 157 Page 159
Reading the Genetic Code	Page 168
The Codon Table The Amino Acids in the Codon Table & their Abbreviations Reading a Codon Table Reading Frames in mRNA Sequences Reading Frames in DNA Sequences Open Reading Frames	Page 168 Page 169 Page 169 Page 195 Page 195 Page 197
Stage 4 of Protein Synthesis: Post Translation Modifications	Page 200
The Destination of Proteins The Protein Secretory Pathway	Page 201 Page 203
An Overview of Gene Expression	Page 207
Similarities & Differences in Prokaryotic & Eukaryotic Gene Expression	Page 208

# SECTION 8: MUTATIONS

Section 8: Mutations	Page 209
Gene Mutations Point Mutations Frameshift Mutations	Page 209 Page 210 Page 212
SECTION 9: REGULATION OF GENE EXPRESSION	
Section 9: Regulation of Gene Expression	Page 232
Revision of Important Terms	Page 232
The Structure of a Eukaryotic Gene	Page 233
Flanking Regions Important Regions of the Eukaryotic Gene	Page 234 Page 234
The Promoter The Terminator The Operator	Page 235 Page 235 Page 236
Summary Diagram of the General Structure of Eukaryotic Genes	Page 236
Structural Genes & Regulatory Genes	Page 237
Regulation of Gene Expression	Page 238
Where does Gene Regulation Occur? Transcription Factors	Page 238 Page 240
The Structure of the Prokaryotic Gene	Page 242
Regulation of Gene Expression in Prokaryotes	Page 243
The Trp Operon	Page 244
Regulation of the Trp Operon	Page 244
A. Regulation by Repression B. Regulation by Attenuation	Page 245 Page 248
Key Differences in Gene Regulation – Eukaryotes vs Prokaryotes	Page 253
Questions	Page 254
Gene Structure & Regulation Questions Questions Relating to the Trp Operon Gene Regulation Questions that Involve Mutations Questions Relating to the Regulation of the Trp Operon by Attenuation	Page 254 Page 258 Page 263 Page 266

# **UNIT 3 BIOLOGY: BOOK 2**

## AREA OF STUDY 1: WHAT IS THE ROLE OF NUCLEIC ACIDS & PROTEINS IN MAINTAINING LIFE?

## PART 1: DNA MANIPULATION TECHNIQUES & APPLICATIONS

Section 5: Applications & Implications of Genetic Technology	Page 111
Recombinant DNA & Gene Cloning	Page 111
Making Bacteria Competent	Page 114
Identifying Recombinant Cells	Page 115
How are Recombinant Plasmids Used in Genetic Engineering?	Page 115
Using Transformed Bacteria to Produce Proteins	Page 122
Using Recombinant DNA Technology to Produce Human Insulin	Page 123
Reverse Transcriptase & Copy DNA	Page 131
Methods of Gene Transfer	Page 132
Gene Cloning	Page 137
Transformation & Transfection	Page 139
Potential and Real Uses of Transgenic Organisms	Page 140
Spider Goats	Page 140
Golden Rice	Page 140
GM Cress and GM "Super Sniffer" Mice Used to Locate Landmines	Page 141
GM Sterile Aedes Mosquitoes	Page 141
GM Bacteria Producing Increased Tryptophan Quantities	Page 142
Death and Deformities in Pigs Using GM Soybeans	Page 142
GM Food Crops	Page 143
Other GM Issue Case Studies	Page 147
Undesirable Eff <mark>ects</mark> on the Environment	Page 147
Loss of Genetic Diversity	Page 148
Genetic Patents	Page 148
GMO or TGO or Both?	Page 150
Genetic Screening	Page 153
Gene Therapy	Page 156
Ethical Concepts Supporting Bioethical Issues	Page 159

# PART 2: KEY SCIENCE SKILLS & EXPERIMENTAL DESIGN

1:	Scientific Method, Experimental Design & Key Science Skills	Page 171
2:	Scientific Investigations	Page 176
3:	Variables in Experiments	Page 180
4:	Scientific Groups	Page 184
5:	Positive & Negative Control Groups	Page 186
6:	Controlled Experiments	Page 188
7:	Developing a Valid Hypothesis	Page 196
8:	Results of Experiments	Page 205
9:	Presenting Data in Gr <mark>aphs</mark>	Page 211
10:	Analysing & Evaluating Data & Making Conclusions	Page 216
11:	Experimental Errors, Uncertainty, Bias & Outliers	Page 232
12:	Writing a Conclusion	Page 241

# UNIT 3 BIOLOGY: BOOK 3

## UNIT 3 – AREA OF STUDY 2: HOW ARE BIOCHEMICAL PATHWAYS REGULATED?

#### SECTION 1: REGULATION OF BIOCHEMICAL PATHWAYS IN PHOTOSYNTHESIS & CELLULAR RESPIRATION

Section 1: Regulation of Biochemical Pathways in Photosynthesis & Cellular Respiration	Page 1
Biochemical Pathways The Role of Enzymes in Biochemical Reactions Enzyme Functioning: How Do Enzymes Carry Out Catalysis? Energy Diagrams Cofactors & Coenzymes Denaturation of Enzymes The Role of Enzymes & Coenzymes in Photosynthesis & Cellular Respiration	Page 1 Page 2 Page 4 Page 7 Page 7 Page 8 Page 11
Factors that Impact on Enzyme Function in Photosynthesis & Respiration	Page 12
The Effects of Temperature on Enzyme Activity Activity Versus Temperature in Terms of Particle Speed The Effects of pH on Enzyme Activity The Effects of Enzyme Concentration on Enzyme Activity The Effects of Substrate Concentration on Enzyme Activity	Page 12 Page 14 Page 15 Page 18 Page 19
The Effects of Inhibitors on Enzyme Activity	Page 20
Competitive Inhibitors Non-Competitive Inhibitors Inhibitors that Regulate a Biological Pathway	Page 20 Page 21 Page 22
The Effects of Coenzymes on Enzyme Activity	Page 22
Enzymes in Photosynthesis	Page 23
Enzymes in Cellular Respiration	Page 23
SECTION 2: PHOTOSYNTHESIS AS AN EXAMPLE OF BIOCHEMICAL PATHWAYS	
Section 2: Photosynthesis as an Example of Biochemical Pathways	Page 36
Important Definitions Meeting the Energy Requirements of Organisms The Role of ATP in Anabolic & Catabolic Reactions	Page 36 Page 37 Page 39
Photosynthesis	Page 44
The Structure of Chloroplasts Light Absorbing Pigments in Chloroplasts Accessory Pigments Electron Carriers	Page 47 Page 52 Page 52 Page 56
Nicotinamide Adenine Dinucleotide Phosphate (NADP)	Page 56

Stages in Photosynthesis	Page 59
Stage 1: The Light Dependant Stage Stage 2: The Light Independent Stage (The Calvin Cycle)	Page 60 Page 74
The Calvin Cycle Phase 1: Carbon Fixation	Page 75 Page 77
Phase 2: Reduction of Glycerate 3-Phosphate (G3P) Phase 3: Regeneration of Ribulose Bisphosphate (RUBP)	Page 78 Page 79
A Summary of Photosynthesis	Page 83
	_
The Role of Rubisco in Photosynthesis	Page 99
Adaptations of Plants to Improve Rubisco Efficiency	Page 99 Page 100
Adaptations of Plants to Improve Rubisco Efficiency C3 Plants C4 Plants	Page 99 Page 100 Page 100 Page 103
Adaptations of Plants to Improve Rubisco Efficiency C3 Plants C4 Plants Comparison of C3 & C4 Plant Leaf Anatomy Differences Between C3 & C4 Plants C3 Plants C3 Plants	Page 99 Page 100 Page 100 Page 103 Page 104 Page 110 Page 100
Adaptations of Plants to Improve Rubisco Efficiency C3 Plants C4 Plants Comparison of C3 & C4 Plant Leaf Anatomy Differences Between C3 & C4 Plants C3 Plants CAM (Crassulacean Acid Metabolism) Plants	Page 99         Page 100         Page 103         Page 104         Page 110         Page 100         Page 110         Page 110         Page 100         Page 110         Page 113
The Role of Rubisco in Photosynthesis         Adaptations of Plants to Improve Rubisco Efficiency         C3 Plants         C4 Plants         Comparison of C3 & C4 Plant Leaf Anatomy         Differences Between C3 & C4 Plants         C3 Plants         C3 Plants         Comparison of C3 & C4 Plant Leaf Anatomy         Differences Between C3 & C4 Plants         C3 Plants         CAM (Crassulacean Acid Metabolism) Plants         Similarities & Differences Between C4 & CAM Plants         Comparison of Carbon Fixation Pathways in C3, C4 & CAM Plants	Page 99         Page 100         Page 103         Page 104         Page 110         Page 100         Page 110         Page 110         Page 110         Page 110         Page 113         Page 114         Page 115

#### SECTION 3: FACTORS THAT AFFECT THE RATE OF PHOTOSYNTHESIS

Section 3: Factors that Affect the Rate of Photosynthesis	Page 123
Limiting Factors	Page 123
Light Availability (Light Intensity)	Page 127
Wavelength (Colour) of Light	Page 144
Temperature	Page 149
Carbon Dioxide Concentration	Page 153
Amount of Chlorophyll	Pag <mark>e 160</mark>
Water Availability	Page 162
Oxygen Concentration	Page 162
Mineral Element Concentration	Page 163

#### SECTION 4: CELLULAR RESPIRATION AS AN EXAMPLE OF BIOCHEMICAL PATHWAYS

Section 4: Cellular Respiration as an Example of Biochemical Pathways	Page 170
Advice from VCAA	Page 170
Metabolism	Page 173
The Role of ATP in Linking Catabolic & Anabolic Reactions ATP as an Energy Storage Molecule The ATP – ADP Cycle Cycling of Other Coenzymes in Cellular Respiration Summary of Catabolic & Anabolic Reactions	Page 175 Page 175 Page 177 Page 182 Page 185

Cellular Respiration	Page 186
Aerobic Cellular Respiration	Page 187
The Big Picture Why Does Cellular Respiration Involve So Many Steps? Stage 1 of Aerobic Cellular Respiration: Glycolysis The Fate of Pyruvate The Link (Transition) Reaction Mitochondria Stage 2: Krebs Cycle (Citric Acid Cycle) Stage 3: The Electron Transport Chain	Page 188 Page 190 Page 191 Page 197 Page 198 Page 200 Page 203 Page 209
Revised Values for ATP Production The Respiratory Balance Sheet	Page 216 Page 216
Summary of Aerobic Cellular Respiration	Page 218
Metabolism of Other Organic Compounds Under Aerobic Conditions	Page 222
The Different Fates of Pyruvate Revisited	Page 246
Anaerobic Metabolic Pathways	Page 247
Anaerobic Cellular Respiration Fermentation	Page 248 Page 252
Stage 1: Glycolysis Stage 2: NAD+ Regeneration	Page 253 Page 255
Alcohol(ic) Fermentation Lactic Acid Fermentation	Page 257 Page 260
Similarities & Differences Between Aerobic & Anaerobic Respiration	Page 273
Factors that Affect the Rate of Cellular Respiration	Page 276
SECTION 5: BIOTECHNOLOGICAL APPLICATIONS OF BIOCHEMICAL PATHWAYS	
Section 5: Biotechnological Applications of Biochemical Pathways	Page 291
CRISPR Gene Editing to Improve Crop Yields Examples of CRISPR-Cas9 Applications for Crops Anaerobic Fermentation of Biogas for Biofuel Production Production of Biofuels Uses & Applications of Biofuels Summary of Inputs, Production & Applications of Biofuels	Page 292 Page 293 Page 296 Page 297 Page 298 Page 298
caninary of inpute, i reduction a repriorition of Dioridolo	. 490 200
